PASS LOCKER

USER MANUAL

PASS LOCKER is an open source app in which you can store your important user names, password …etc. safely without fearing any threat. PASS LOCKER is completely secure and provides you high safety for your user names, passwords.etc. You can create, edit, delete your passwords, usernames …etc.

Here is how you can use PASS LOCKER:

REGISTERING

When you first open the application, after you download, a window will come saying that you have to register your "Master" user name and password. So go ahead and register your "Master" user name and password. After this, every time you open the application, you have to use this user name and password.

CREATING NEW

After you login, you can create a new entry. Just click on the file menu and click on "New" or click on the "New" button on the 'Quick Access Toolbar '.Then a form will appear .Give the appropriate data like the Group, Title, User Name , Password, URL and Notes. Then click on the Save button. To close the window click on the close button. Then go to the main screen and right click on a blank area. A menu will appear. In that click on 'refresh' and the entry you entered will displayed on the screen. In that you will get a unique ID for each entry.

EDITING

To edit an entry, just double click on that entry and an edit form will open with the previous details. Edit the entry according to your wish and then click on save. The changes you made will appear on the screen.

DELETING

If you want to delete an entry, click once on that entry and you will see the delete button in the quick access toolbar gets highlighted. Click on the button and your entry gets deleted.
